

QuesCom MOBILITY

QuesCom Mobility solution allows benefiting from fixed and mobile convergence. The single number reach delivers optimal availabilities. Smartphones become an effective Dect replacement solution. Corporate IT can centralize VoIP/WiFi and GSM technologies in order to optimize total cost of ownership.

Employees may activate corporate PBX features on their mobile phone. Reactivity and enhanced communication privacy make better business.

Single Number

Presence management

Voice communication encrypting

Fixed - Mobile handover

Fixed and mobile dual-ring

Corporate chat system

MULTIPLES RING

Callers always dial a personal single number reach. Multi-ring between fixed, mobile or softphone occurs simultaneously. Employee pickups the call wherever is the most convenient for him.

With smart combination of single number, convergence and mobility, corporate resources remain efficiently reachable for their customers.

SMARTPHONE BECOMES A PBX EXTENSION

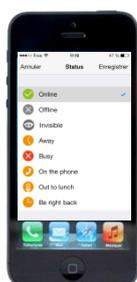

Smartphones embed *MobiQ® Evolution*, a dedicated mobile application.

A fully featured softphone make mobile phones fully part of corporate telecom system. It delivers all standard features like: IVR, ACD, follow me, music on hold

Mobile becomes the natural business convergent tool.

MOBIQ® EVOLUTION MOBILE APPLICATION

CERTIFICATIONS

MobiQ® Evolution for smartphones is available for iPhone, Android and Windows Mobile.

USE MOBILE + WiFi VOIP AS A DECT REPLACEMENT SOLUTION

PBX features are maintained on mobile phones, such as: conferencing, call transfer, short dialing plan, music on hold, voice messaging, DDI display. Each call placed from any device shows your single number.

Benefit from voice over WiFi capacity of your mobile device.

CORPORATE SOCIAL NETWORK

MobiQ® Evolution also delivers business social network features: instant messaging between employees, directly accessible from their mobile.

As our time gets tighter, presence information can show you availabilities of your correspondent before you place a call.

To go even further QuesCom Mobility solutions may add geolocation features.

While receiving a call, mobile phone screen can display specific information related to the caller.

ENCRYPTED COMMUNICATIONS

Interested in keeping your calls private?

MobiQ® Evolution together with the QuesCom gateway enable voice encryption between corporate individuals. Either between sites as well as between mobiles (closed user group).

ENCRYPTION STANDARD SUPPORTS

TLS and SRTP
Others upon request

ADDRESS BOOKS INTEGRATION

MobiQ® Evolution delivers a dynamic corporate contacts lookup:

MS Outlook, Windows contacts, Mac Address book, LDAP Server, XMPP Roster, XCAP Server iOS, Android and Windows Mobile contacts.

Direct CSV or LDAP contact import also available.

CALL RECORDING

At any time during a call, user can decide to record the conversation.

It will be stored into an audio file.
